Kott is a one-stop-destination for window covering inspiration, where you can choose from a large range of products and fabrics.

Our team is fascinated by light and shadows, and we work to offer solutions to control the light and create in trend windows cover decoration.

We propose products of varying colours, structures, properties to create harmonious interior spaces.

The collection is designed as to contribute both aesthetically and functionality. Our products are suitable for home residential or offices.

With further selected product fields we continuously enlarged our competence in the field of interior design and window coverings.

KOTT

The background of the page is a close-up, vertical view of horizontal wooden blinds. The wood has a natural, light brown grain with darker lines and knots. The blinds are slightly out of focus, creating a sense of depth. The text is overlaid on the left side of the image, appearing as if it's cut out of the wood or has a wood-grain texture inside the letters.

WOODEN BLINDS MADE FROM REAL WOOD

25_{mm}

25mm is ideal to cover small windows and can be used inside Perfect Fit System.

We can mount side guidance system on the edges of the slats and bottom bar.

35_{mm}

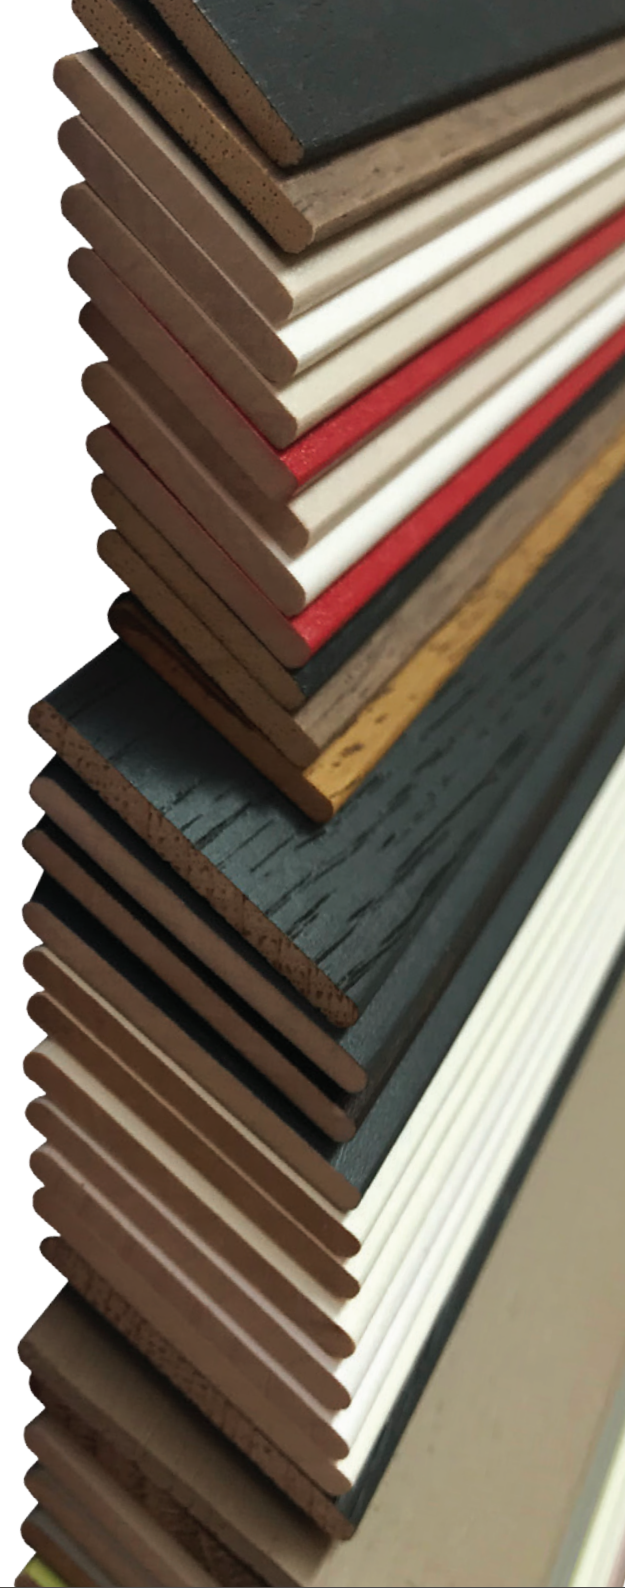

Discreet, still modern these slats are used to enhance the beauty and comfort of homes. That's why they work perfectly with oak wooden floors and a relaxed furniture design.

50_{mm}

The ideal slat size with perfect characteristics for both domestic and commercial use. The natural beauty and texture of the wood can be seen throughout the slats creating a lovely connection between nature and homes.

65_{mm}

The larger 65mm slat is perfect for large windows with heights over 2.5m by helping keep the scale of the window and the blind in balance. This type of blind can be manufactured only from basswood and abachi wood due to the weight of such projects.

Stains

This finish preserves the wood fiber and highlights some colors inspired by the natural wood species like walnut, mahogany, beech and oak.

Fully Painted

It offers a wide variety of options and changes constantly, according to interiors fashion trends. This type of finish can be manufactured to any RAL or NCS codes on request for special projects.

Waxed

Natural wax is a good protector for the wood and equally gives a great finish, uniform and shiny. The wax is 100% natural and such finishes can be applied to oak and abachi wood products.

Oiled

We use natural oil that is applied to toys, flooring and kitchen countertops, complying with EN 71-3 Safety for protection and safety when touched. The oil brings the wood back to life and protects the natural colour and look. Special oils for pigmented and handmade products are also available.

All our wood products that are manufactured in compliance with EU and international Laws and our raw materials come from reputable European suppliers.

BassWood

The most stable wood used for the production of wooden blinds. It has a slightly yellowish color, with an average fiber density and uniform structure. It is especially used for all the types of finish, stain or paint finish. It can be produced in different slat widths from 25mm to 65mm or 70mm.

Abachi

The source of origin is from Africa and is a light wood that can be used with large blinds over 3m wide. Due to the light nature of this wood the operation of the blinds is a lot smoother and easier for the end user. Its color is yellow and may have minerals or small knots.

Oak

It is a hard wood with a dense fiber structure that can be highlighted with different methods of lacquer, oil, wax finish, antiques and distressed. The color is golden and each slat is unique in fiber structure due to the growth rings.

Custom

For special projects we can manufacture wooden blinds from other types of wood like walnut, chestnut, beech, ash, mahogany, etc. We will use special oils to protect the surface for UV and keep the wood grain structure for design products.

Metal Headrail

The wooden blinds have a metal headrail which is waterproof treated and long lasting. We use 2 headrail dimensions:

- **37mm width x 41mm height** for 25mm slat with ladder string and ladder tape and 35mm slat with ladder string only;

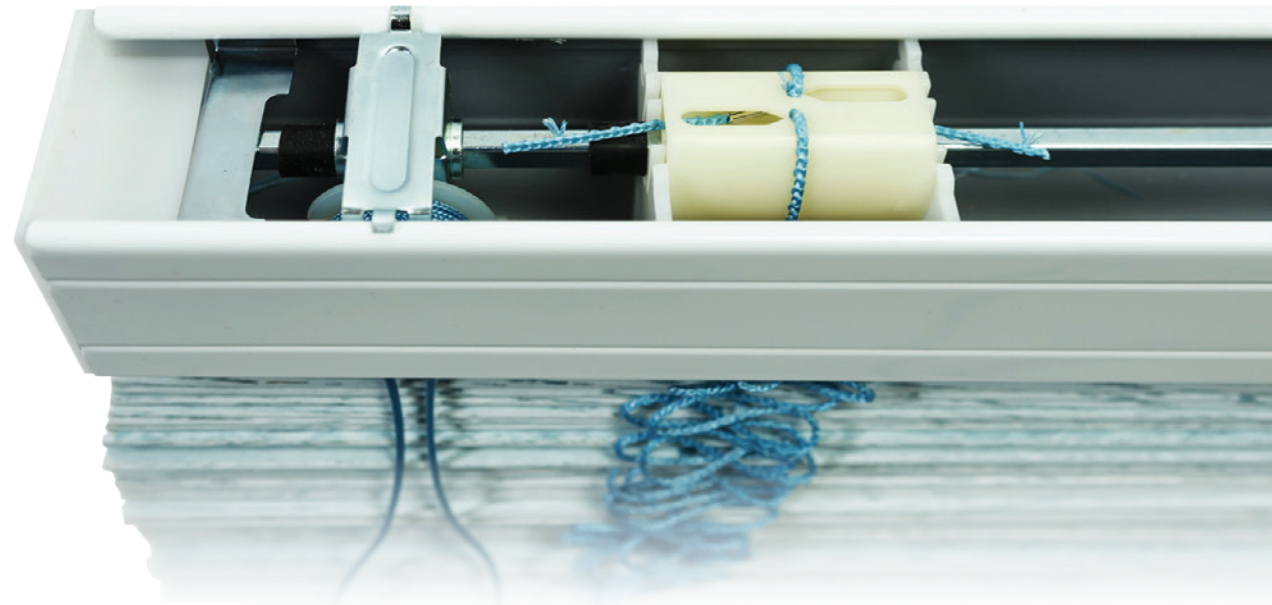

- **50mm width x 58mm height** for 35mm slat with ladder tape only, 50mm slats with ladder string and ladder tape and 65mm slat with ladder string and ladder tape.

The headrail can be fixed either on the ceiling or the wall and comes in 6 different colours: white, cream, beige, brown, black and grey.

Controls

The wooden blinds are standard manufactured with the tilt control on the left and the lift control on the right. From the standard there are several variations of reverse controls or both controls on the same side (RL, LL or RR).

The products meet safety standards according to European laws EN 13120. Each blind has stop rings that block the inside cords to come out of the slats more than 10cm.

The breakaway connectors group the cords and disengage when an external force bigger than 3 kg is applied. We also provide safety devices to attach to the wall and tidy the cords around.

Brackets

The standard blinds are available with swivel brackets and centre support brackets in the same colour as the headrail for lengths greater than 800mm. On request we can offer box brackets in the 6 colours of the headrail.

Tassels

Our standard offer is for tassels that are in the same colour as the wooden blind. Customization options are available in different colours or metallic finishes.

Min & Max

Width 380mm – 2980mm

Drop 400mm – 3050mm or on request.

Stack Size

For not obstructing the opening of the windows please refer to the next table regarding the stack height when blind is up. You can determine the stack height depending on the drop of the blind.

BLIND DROP	100cm	150cm	200cm	250cm	300cm
25mm	20cm	27cm	33cm	40cm	47cm
35mm	17cm	21cm	26cm	31cm	35cm
50mm	15cm	19cm	22cm	26cm	29cm
SLAT SIZE					

Side Guidance

For the blinds that are mounted on the doors or windows that open and tilt inside we recommend the guide wire system.

Metal guide wires secure the blind to the frame and prevent it from moving around.

Ladder Strings

The standard option for our wooden blinds is ladder strings.

We offer more than 30 colours from whites and light colours to grey, black and coloured.

Unless otherwise specified, we assign the best match string to the blind colour.

Sonnesse

Designed for Acoustic Comfort. The Sonnesse range of high-acoustic-performance motors and accessories has been developed by Somfy's global team of engineers and technicians using state-of-the-art research and development tools. They are available in two 230Vac formats:

A. Sonnesse 40 WT

Hard wired with progressive limit adjustment. Operated by radio wall switch control – 1810880 single channel RTS wall switch.

B. Sonnesse 40 RTS

With electronic limit adjustment. Operated with radio remote handset – 1810630 single channel RTS handset.

Tilt-Only WireFree

Battery power motorization for venetian blinds. Powered by battery wands or solar pack, motorised solution that provides 180 slat tilt operation. No wiring, no disruption to decor, no electrical knowledge required, simple installation as for a manual blind. Compatible with Telis 1 handset, single channel RTS.

MS35 | 35MM STANDARD MOTOR

230V AC mechanic limit setting. 10 Nm Torque.

MEV35 | 35MM ELECTRONIC RADIO MOTOR

No special springs needed, obstacle stop function, electronic limit setting, Torque 10 Nm.

MLE35 | 35MM 12V ELECTRONIC DC RADIO MOTOR WITH BATTERY

Electronic limit setting, low energy consumption, automatic power of switch, 12V DC with built-in Li-ion battery. Operated with remote control (1 or 5 channels).

MTE 50 | 50MM 12V ELECTRONIC DC RADIO MOTOR

Built-in receiver, preference position, electronic limit setting, 12V DC motor.

* Comes with a warranty of 5 years.
Brel radio motors can be controlled with smarthome systems (Homewizard, Trust, RFXcom).

Ladder tape swatches

WOODEN BLINDS

We offer a wide variety of colours from lighter to darker tones.

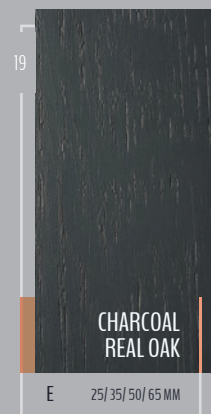

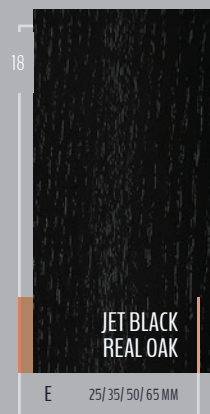

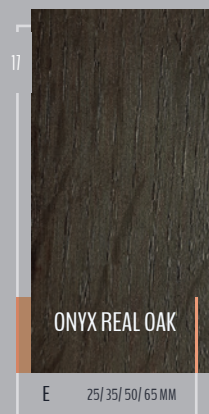

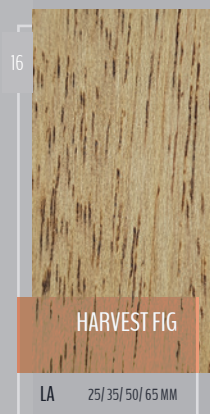

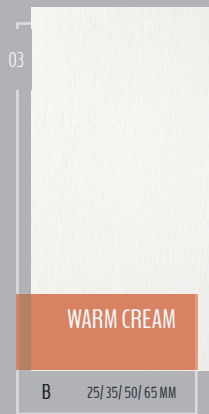

The decorative ladder tape can be used for all the slats widths of 25mm, 35mm, 50mm and 65mm.

Only for 50mm slats, we offer two tape widths - 25mm and 38mm.

*Our products are
manufactured in Europe,
with wood from sustainable
sources.*

*The wood goes
through a full process
of drying, cutting,
shaping, painting and
assembling finished
blinds in our purpose
built factory.*

*Due to the three types of wood available and to
their finishes, you can match your wooden
blinds with the flooring, furniture,
curtains or wall color.*

*Our products can be used to easily create
unique decors.*

Concept

WOODEN BLINDS

ENERGETIC PASSIVE HOUSE

The concept of passive house requires a building that is energy efficient, accessible as cost, comfortable and ecological at the same time.

The International Passive House Association can provide certificates and help with information to define conceptually the construction of such a home.

Wood is recognized for its thermal insulation properties. Wooden blinds can help control temperature and filter the light intensity.

With our products you can get better parameters for a comfortable and independent energy house.

Extra Services

WOODEN BLINDS

CUSTOM

We also offer extra services to customize the wooden blinds to perfection. All of the below are done on special request:

- Non standard width/drop;
- Special RAL and NCS colours available on request;
- Cutting the wooden blind in accordance with the skirting board not to affect the functionality of the wooden blind;
- Design of the commercial spaces, restaurants and hotels to client's own specifications.

- Custom colour accessories (ladder string/ladder tape) are available on request;
- Contrasting colour pelmet and bottom bar;
- Motorized systems.

We offer full, friendly customer service before and after sales.

KOTT

*Roman Shades
Collection,
Types,
Accessories and
Options*

We produce soft cloth roman blinds in various types.

A roman blind is a warm addition to a room, on its own or in order to complement other types of blinds or even coordinate with curtains.

Our blinds are manufactured on high standard mechanisms, easy to lift and lower the blinds to desired height.

They can be lined or unlined and also completely block the light which makes them ideal for bedrooms.

Roman blinds are very versatile and can also be used for decoration purposes only, adding value to the whole design of the room.

Modern

The blinds are manufactured with translucent tape attached to the back of the blind and neat equal folds. This type will only be used for unlined blinds and voile blinds.

Contemporary

The blinds are manufactured with rod pockets made from the same material. This type will only be used for unlined blinds and voile blinds. This type can create problems on patterned fabrics as some of the pattern will be interrupted by the pockets.

Classic

This type is used for lined blinds. There are 3 types of lining that we use to manufacture blinds for domestic use (standard, thermal and blackout) and 2 types for commercial use (standard FR and Blackout FR).

We work with leading manufacturers of textiles from England, Spain, Holland, Germany, France, etc.

We bring special materials in new trends of design and with technical properties.

Collection 1

We included polyester, traffic-resistant and easy-to-maintain materials.

Collection 2

Is dedicated to soft materials and colors. The main feature is that the same materials can be used for upholstery to create a unique interior.

Collection 3

We included fabrics of natural material such as linen or cotton, or mixed. Usually they are simple and double-width materials. You can bring nature to your interior.

Collection 4

Special designs with special prints from geometric shapes or abstract drawings helped us to form a rich and special collection. They can be used both in classical and modern arrangements.

Collection 1.0

We wanted to create a very competitive collection without compromising on the quality of the fabrics. We sourced our fabrics in EU for quality continuity and control.

We work with our customers for any special requests—contrasting borders, scalloped bottom edge and any other requirements.

Headrails

ROMAN BLINDS

Cassette System

This system is recognized for its functionality; with the help of the cords it is possible to determine the height of the blind. Each roll is individually mounted and cord is passed through the tape. The maximum weight is 8kg.

Cord Lock

The classic system works with cords and can be operated with a cord lock to determine height. It is recommended to be used in tight spaces due to narrow 8.5mm metal profile.

Sonnesse

Designed for Acoustic Comfort. The Sonesse® range of high-acoustic-performance motors and accessories has been developed by Somfy's team by using the best research and development tools. Available in two 230V formats:

A. Sonnesse 40 WT

With connection to switchboard and progressive limit adjustment. Operated by radio wall switch control – 1810880 single channel;

B. Sonnesse 40 RTS

With electronic limit adjustment. Operated with radio remote handset – 1810630 single channel handset.

Cord Lift WireFree

Somfy solutions are easy to use and install and compatible with home automation. The engine helps to raise or to lock the desired position and can be set to upper or lower limits.

MTE 50 | 12V ELECTRONIC DC RADIO MOTOR

Compact construction, electronic limit setting and electronically repaired by a motor.

MEV35 | 35MM ELECTRONIC RADIO MOTOR

You can set the electronic limits and stop in the desired position. Connected to 230V.

Pencil Pleat

Is the traditional heading of a curtain, easy to use and install. Compatible with all track and pole types.

Pinch Pleat

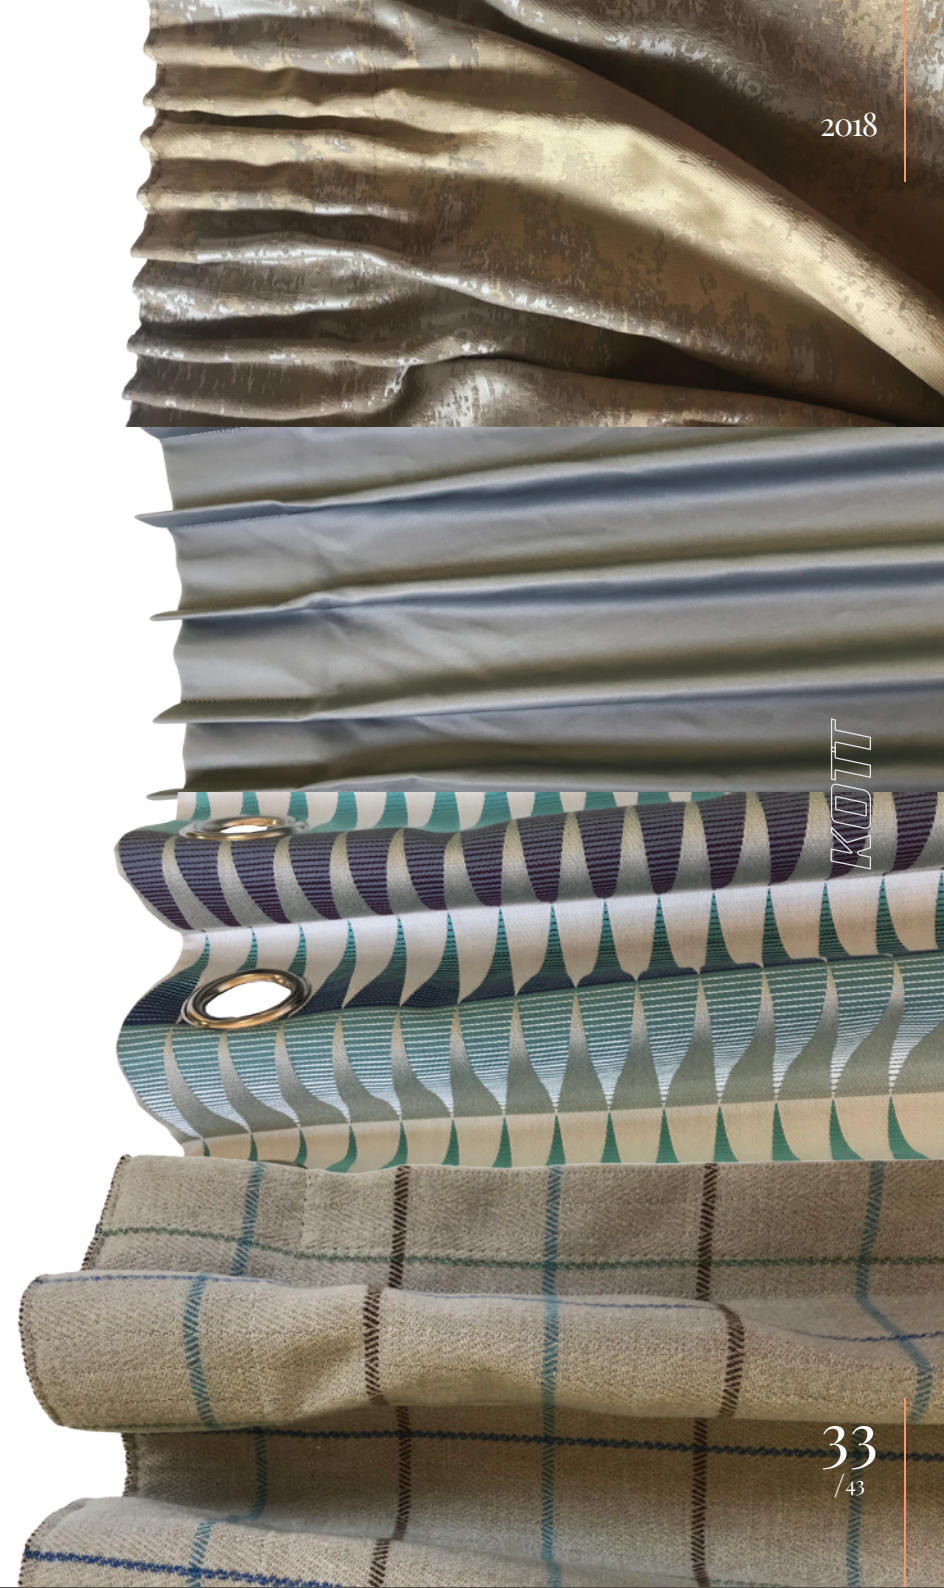

It is a decorative heading that can be used with all kinds of materials. They can be finished in 3 models - Single, Double and Triple. Compatible with all track and pole types.

Eyelets

An alternative design that offers the ability to combine the different eyelet colors with the type of material. They are easy to install and the available sizes for the eyelets are 40 or 60mm diameter. The rings are available in silver, gold, brushed silver and gunmetal. This type of heading is only compatible with poles and require no pole rings.

Waves

Offers a modern look and can be used with both transparent and full materials. This heading type requires special tracks. They are especially recommended for large windows to create height.

Fabrics

CURTAINS

We use well established and reputable European fabric houses for our selections of fabrics.

We update our collections to keep up with the forever changing world of interior design.

Accessories

CURTAINS

The curtains can be accompanied by accessories and customizations. Standard accessories:

- Tiebacks*
- Special hooks on request*
- Shaped curtains*
- Customer's own fabrics*

CUSTOM
SHUTTERS
MADE
FROM
REAL
WOOD

Full Height

Covers the full height and the width of the window. Can be splitted in more panels up to 900mm each;

Café Style

The shutter follows the style of the window and stops at a specific height to allow light to come through at the top. This type is the ideal mix between privacy and light control.

Tier-on Tier

The height is covered with the help of two independent shutters stacked on top of each other. The top shutter and the bottom shutter open independently.

Bi-fold Track

Used for large windows or to separate rooms, panels can be operated smooth using a track guide.

Our shutters are made of basswood, a stable wood with a uniform structure.

The products are manufactured in Europe and have a delivery term of 20 working days.
