Fatih Aslantaş

While designing Hexa, we wanted to establish a product group with a wide range of use, serving to multiple users, and fully addressing the needs. Thanks to its modular structure, it gains ground in many different locations in different combinations. Hexa became a product that is capable of addressing the needs of its user and the environment it is in.

「SIMPLE GEOMETRY AND
MODULAR FLEXIBILITY
TIMELESS AND MECHANIC
A PRODUCT.」

Hexagonal and diagonal lean geometric forms can be used alone, as they form endless variations coming together. As the seating units are not assembled to each other, the user can change the sitting order whenever he wishes.

The hexagonal module, which can be used as a backrest and backless, offers a more comfortable session for the user, while the diagonal modules will come together to meet the need for multiple sessions. In the backrest hexagonal module, the sitting depth is more than standard seating. A more relaxed session was targeted.

While the hexagonal module that can be used with or without backrest offers its user a much more comfortable seating, the diagonal modules come together and fulfill the multi seating need. In the hexagonal module with backrest, the seating depth is more than the standard seating measurements.
